Irreducible divisions a/b of a string where $1 \le a,b \le 36$ (31-limit harmonic space)

Increasing orders n of the Farey sequence F_n whose terms comprise the nodal divisions of a string producing harmonic partials 1* through n*. The partial produced at a division a/b is b*. Stopping the string at a division a/b measured from the bridge (0/1) results in a sounding pitch with frequency ratio b/a to the open string.
